

EPO GLOBAL PATENT INDEX

Powerful searching in worldwide data

Subscribe to GPI, powered by the MIMOSA search engine, and tap into a range of new search possibilities.

Do any of the following situations apply to you?

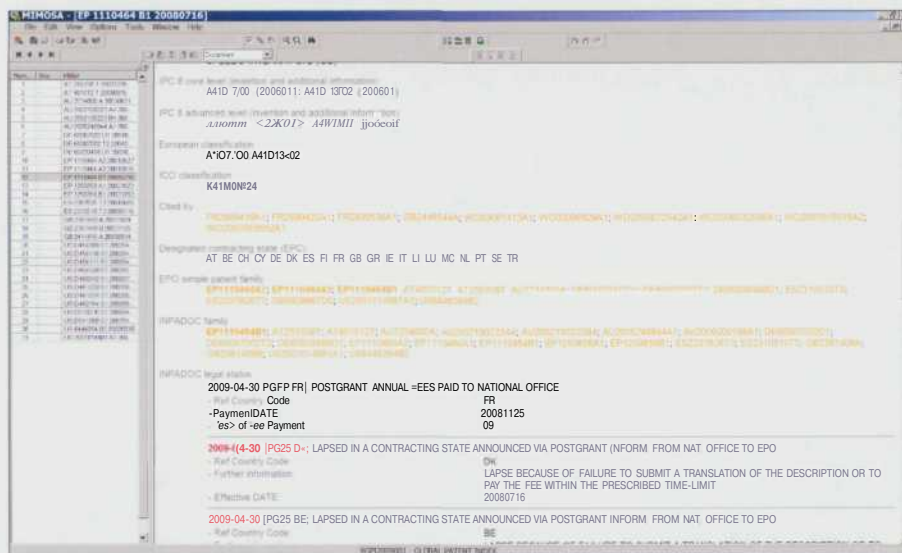

- You repeat the same search regularly as new patent applications are published
- You wish you could enter more than four search-terms at once
- You need to combine the AND and OR operators to create complex search statements
- You would like to customise your results screens to include exactly the information you need

If yes, then GPI could be the product for you.

Main features

- The data used in *esp@cenet* and MIMOSA search capabilities
- In-depth indexing of the data, making it more searchable and visible
- Approximately 100 different search criteria
- Weekly online updates
- Query manager for saving and re-using search queries

GPI has been designed as a tool for worldwide state-of-the-art searches and patent watches.

One of GPI's strengths is its ability to fetch data from other EPO sources "on the fly", whenever it needs to. Here we see, for example, that GPI has picked up patent family information from the EPO's databases.
